

Bandela Subab Rao

E-mail : subbub878@gmail.com

Mobile: +91-9000544223

Profile Summary

- 5.3 years of experience in Embedded Software Testing, specializing in Unit and Component Integration testing
- Hands-on with test tools like TESSY, Vectorcast, LDRA, Rhapsody, Ascet, AEEE PRO, and RTC.
- Proficient in Black Box & White Box Testing, SDLC, and Defect Life Cycle processes.
- Knowledge of DO-178B standards for aerospace safety-critical systems.
- Proficient in C, Embedded C, and Assembly
- Have knowledge on CAN and familiar with UDS, and RS232 protocols

Professional Experience

- Worked with HCL Technologies, Bangalore as a Lead Engineer from August 2022 to till date.
- Worked with AMEDHA INFO SYSTEMS Pvt Ltd as a Test Engineer from Feb 2020 to August 2022.

Academics

- Bachelor of Technology in the Department of **Electronics and Communication Engineering** from **ADITYA COLLEGE OF ENGINEERING , JNTU UNIVERSITY , KAKINADA.** [2014-2017]

Tool Box

Domain Experience	Automotive, Aerospace
Software & Automation Tools	TESSY, Vectorcast, LDRA, Rhapsody, SharCC, Ascet, AEEE PRO, Steps, TKWinx, Project Loader, Trace32, IAR, Eclipse, GCC Compiler, Debuggers (RL78, HC12)
Communication Protocols& Tool's	UDS, RS232

Project Summary

PROJECT 1:

PS-SX (Exhaust Gas Sensor for Particulate Matterer):

Client : ROBERT BOSCH

Environment : Manual Testing: C, Tessy ,(Testing Tool).

Role : Software Verification Engineer

Description:

Due to emission regulations in the US and Europe the need for DPF in most Diesel vehicles is mandatory. For onboard diagnosis (OBDII) it is required to monitor the DPF system for particle emission since US2013 and EURO6. The Bosch exhaust gas sensor for particulate matter (EGS-PM) is solely designed as a DPF (Diesel Particulate filter) monitoring sensor for onboard diagnosis (OBD) purposes in diesel vehicles .The particulate matter sensor enables diagnosis of DPF. It is integrated into the exhaust pipe downstream of the DPF. The sensor function is based on the resistance changing between two electrodes as soot is deposited on element. The Bosch EGS-PM consists of the sensor probe, the sensor wiring harness and the sensor control unit (SCU). Each sensor is programmed with an “end of line” data set stored in the SCU. Therefore, the connection of sensor probe and SCU is non-detachable.

Unit Testing Responsibilities:

- Responsible for developing Unit test cases.
- Performing unit testing using Tessy tool.
- Creating Defect Work Item in RTC.
- Performing Base lining after performing Unit Testing.
- Performing Test Review
- Performing defect fixed testing.
- Providing Training for new engineers.

PROJECT 2:

Client : Bosch

OEM : Honda/Nissan

Testing : Component Integration Testing

Tools : ECU TestTool (Tracetronic), Steps, TKWinx, Project Loader
